

Accomplishments:

First thing I'd thought to mention, while learning the basics of rails, js, css and Heroku, I've fallen into dependency hell numerous times during installation and deployment. This brought me to a level of frustration I didn't think possible. Thinking of how web developers may face these issues daily, I have gained a newfound respect for them.

Rails:

Rollbacks

HABTM

Nesting

JS:

Axios (I guess this is part of js?)

Routes

Links

Input

Buttons

Dropdowns

Hiding elements

CSS:

Hover

Backgrounds

Heroku:

Procfile

How big of a nightmare it is to deploy something onto it in general I seriously had to reinstall gems but it was enough so I had to do a new rails generate but it still wasn't working until I uninstalled ruby and rails then made a fresh folder and put my old fil-
